

For over seventy years **Scalise Industries'** chiller and cooling technicians have performed emergency service, preventive, and maintenance repairs for virtually every type of commercial and industrial property to help them help them maintain reliable operation of their equipment.

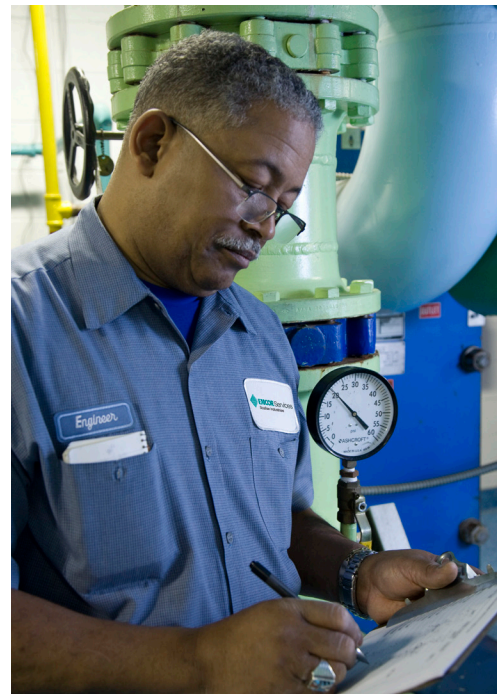

Programs to Prepare your Equipment for Every Season

Have you taken the steps required to prepare your valuable cooling equipment for the upcoming spring and summer seasons? Coupled with proper preventive maintenance, our equipment assesment programs help reduce disruptions caused by emergency repairs and replacement by making sure your cooling equipment is in top shape before the season begins.

We offer a health assessment of your chiller plant and cooling equipment that includes the following:

- » Standing leak test
- » Review running parameters
- » Review alarm history
- » Download database
- » Check system flows
- » Inspect electrical systems
- » Inspect control systems
- » Inspect cooling tower or condensers
- » Perform running inspection
- » Report findings and make recommendations to improve equipment operation

Call EMCOR Services Scalise Industries today to schedule your assessment. We will complete a full evaluation of your cooling systems and make recommendations to help your operation prevent costly repairs and system breakdown. We also offer special discounts for multiple pieces of equipment.
