Your Single Source for Fire, Smoke, & Combination Damper Services

Fire, smoke, and combination dampers play a critical role in containing fire and smoke to protect occupants and prevent costly damage. In the event of a fire, these dampers are an essential component to a building's safety.

Dampers act as "first responders" to a fire, instantly activating at the initial signal of heat. They interrupt the airflow of smoke, resist the passage of fire, and maintain the integrity of fire separation. Proper operation of fire and smoke dampers may mean the difference between a 'nuisance fire' and a fire with disastrous consequences.

Are your facilities code compliant?

Per NFPA 80 and NFPA 105, building owners are responsible for having inspections performed one year after installation and every four years thereafter. Failure to comply may result in a voided insurance policy, lawsuits, financial loss, and even criminal violations.

Scalise Industries is certified to inspect your dampers.

Our technicians are trained to inspect, test, maintain, and repair dampers to ensure there is no damage or interference due to rust, bending, and misalignment which can restrict movement. We'll assess your equipment and identify your optimal option.

Did You Know?

Scalise Industries is one of the only ICB/TABB certified HVAC Fire Life Safety Contractors in the Western PA marketplace trained to inspect, test, maintain, and repair fire and smoke dampers.
